Overview

The GPS4830 combines the benefits of the new high efficiency GP100 rectifier with the time tested cabinet design and distribution found in the GPS4848. Utilizing the 1RU GP100 48 VDC rectifier, a fully equipped bay populated with 12 rectifier shelves (24 rectifiers) allows for as much as 144 kW of power in a mere 25 inches of vertical space, leaving 44 inches of space for installation of distribution panels.

Cabinet Options

The 4830 system can be deployed with capacity of up to 2760 amps @ 52 VDC in a single cabinet or expanded over multiple cabinets. It is designed for either internal input AC breakers or terminal strip AC input. Several rectifier AC terminations options are available. See details under the cabinet specifications. Rectifier shelves can be spread across multiple bays or concentrated to a single bay. For greater flexibility and working space, the 4830 may be combined with a larger 36 inch wide distribution bay to accommodate large cable termination and egress.

Rectifier Options

The GPS4830 utilizes the highly efficient (96.5%) GP100 rectifier with either high line 380/480 VAC input (H3 option) or low line 200/208/240 VAC input (L3 option). Both rectifier versions provide 6kW output at 48 VDC nominal.

Controller Options

Galaxy Millennium II

The Galaxy Millennium II controller combines sophisticated power monitoring and remote management. This controller simplifies operations and maintenance while lowering administrative costs supporting up to 72 rectifiers. With the addition of a bay interface card (BIC 11), multiple cabinets can be banked together to increase overall power output to meet demands, and also allow for future expandability. Remote peripheral modules (RPM) can support over 500 monitoring points for ABB or third party devices. Ethernet, SNMP, Modbus RTU, and TL1 provide integration with power engineering and NOC workflow.

Galaxy Pulsar Plus

As an economical alternative, the GPS4830 can be equipped with the Pulsar Controller. It is designed to monitor and control system components including rectifiers, and distribution modules via a multi-drop RS485 digital communications bus. System status, parameters settings, and alarm thresholds can be viewed and configured from the controller's front panel or local/remote PC interface. The Pulsar Plus option is only available with single bay systems that do not have contactors or require remote peripheral modules (RPM).

Advantages

- GP100 rectifier based configurations
- Up to 2,760A @ 52 VDC capacity per bay w/ GP100L3 rectifiers
- Overall system capacities in excess of 12,000 amps
- Galaxy Pulsar Plus or Galaxy Millennium II controller options
- 480 or 208 VAC “true” 3-phase input options

Cabinet Specifications

Mechanical

Height	84.0 inches (2,134mm)
Weight	23.6 inches (600mm)
Depth	23.6 inches (600mm)

Thermal

12 Rectifiers (GP100H3 / GP100L3) @ 100% load	3000 W (10,236 BTU/hr) / 3,792W (12,939 BTU/hr)
24 Rectifiers (GP100H3 / GP100L3) @ 100% load	6000 W (20,472 BTU/hr) / 7,584W (25,878 BTU/hr)

Environmental

Operating Temperature Range	0°C to +43°C (32°F to 113°F)
Operating Relative Humidity	< 95% non-condensing
Storage Temperature Range	-40°C to +85°C (-40 to 185°F)
EMC	FCC and CISPR32 (EN55032) Class A
Immunity	GR1089, EN55024

Agency Certifications

UL	Canada/US UL62368/UL1801
EMI/EMC	CISPR class A conducted and radiated
NEBS Level 3	Evaluated by independent NRTL test lab to Telcordia GR63, Issue 3 & GR 1089, Issue 5.

Rectifiers

Overview

The GPS4830 family of products are structured around two classifications of power rectifiers dependent on the input voltage available. Both versions provide for 48 VDC nominal output. Refer to specifications for more details.

- GP100H3R48TEZ: 3 Φ , 380/480 VAC Input
- GP100L3R48TEZ: 3 Φ , 200/208/240 VAC Input

Key Features

- Developed for extended temperature ranges
- Redundant fan cooling
- 1U height, hi power density
- RoHS compliant
- Digital load sharing over robust RS485 communications
- Front panel LED indicators
- Wide range AC input
- 48V back bias
- Hot pluggable

Features

- Compact 1RU form factor provides high power density of 27 watts/in³
- Plug and play with automatic ID - installation of the rectifier in a shelf connected to a compatible system controller initializes all set up parameters and IDs shelf position automatically. No adjustments are needed. Product identifications, serial numbers and software versions are provided in the embedded inventory report page.
- Monitoring / control – the built in microprocessor controls and monitors all critical rectifier functions and communicates with the system controller using the built in Galaxy Protocol serial interface.
- Efficient with 95.5 % peak efficiency
- Balanced draw from each of the three AC input phases
- 6,000 Watts at 48 VDC from three wire 3 Φ 200 to 240 VAC (no neutral is needed)
- Constant power for output voltages from 48 to 58 VDC (Output voltage programmable)
- Operates over a broad temperature range: -10°C through +75°C (Output derates at 2% per °C beginning at +50 °C)
- Fail safe performance – Internal faults isolated from output bus; hot insertion capabilities allow for rectifier replacement without system shutdown; soft start and inrush current protection prevent nuisance tripping of upstream breakers
- Extended service life – parallel operation with automatic load sharing ensures that units are not unduly stressed
- Simple Human Factors – 3 front panel LEDs indicate AC good (Green), DC good (Green) or Fault (Red)

Outline Drawing

Controllers

Galaxy Millennium Controller II™ Controller

Galaxy Millennium II is our flagship controller designed to meet the needs of the most advanced power systems. Building on the Galaxy Millennium platform, the Galaxy Millennium II delivers state-of-the-art performance by combining sophisticated control, monitoring, and remote network access previously on three separate circuit packs into a single integrated unit. The controller has been designed to simplify plant administrative and surveillance routines as well as reduce operating, provisioning, and personnel expenses. Configuration of the Galaxy Millennium II can be performed via menu based front panel display, a local terminal or remote modem using EasyView2, or through a local or remote network connection utilizing standard web browsers or network protocols. In addition to its standard integrated monitoring capabilities, this controller offers extensive external monitoring using bay interface cards (BICs), distribution control cards, and remote peripheral monitoring modules (RPMs) designed for various inputs and transducers. Additional external relay contacts are also available. The Galaxy Millennium II, with integrated network access, allows for advanced network supervision using standard network management protocols and available network management software. The ABB Galaxy Manager network management software can be used to meet power system engineering, operations and maintenance needs. Via the World Wide Web, users gain access to live data and information logged into Galaxy Manager's centralized server from each monitored system controller across the power network.

Key Features

- Integrated 10/100Base-T Ethernet Network capability
 - TCP/IP (IPv6 and IPv4 compatible)
 - SNMP (V3, V2c, V1) for management - SMTP for email
 - Telnet/SSH for command line interface
 - TL-1
 - DHCP for network plug-n-play
 - FTP/SFTP for rapid backup and upgrades
 - HTTP/HTTPs for standard web pages and browsers
 - Compatible with Galaxy Manager and other standard network management packages
 - Standard shielded RJ-45 interface referenced to chassis ground
- MODBUS Communications Protocol
- Optional Data switch
 - Connections to 3 standard RS-232 devices for pass-through and alarm management
 - BSN extension to provide 3 additional
- Configurable RS-232/485 port for remote via TL1/X.25
- Multiple password-protected security levels

Standard System Features

- Monitoring and control of many serial connected devices
 - Maximum of 40 serial switch mode rectifiers per bay for GPS4830 family
 - Maximum of 8 cabinet bays when configured using bay interface cards (BICs)
- Standard and custom User Defined system alarms
 - Alarm cut-off
 - Alarm test
 - Multiple-level alarm severity: Critical, Major, Minor, Warning, and record-only
- Standard rectifier management features
 - Automatic rectifier restart
 - Reserve engine transfer
 - Adaptive Rectifier Management (ARM)/Energy Efficiency
 - Remote rectifier (on/off) control
 - Automatic rectifier sequence control
 - N + X redundancy check
- Low Voltage Load and Low Voltage Battery Disconnect Options (3)
- Various levels of configuration, statistics, and history
 - All stored in non-volatile memory
 - Remote and local backup and restore of configuration data
- Remote and local software upgrade
- Basic, busy hour, and trend statistics kept
- Detailed history kept
- Maintenance reminders
- Inventory management
- User defined events and derived channels
- Hardware DIP switch access control

Standard Battery Management Features

- Float/boost mode control
 - Manual front panel boost
 - Manual timed boost locally, T1.317, and remotely initiated
 - External timed boost
 - Battery thermal protect module (BTP)
 - Auto boost terminated by time or current
- Battery discharge testing
 - Manual
 - Periodic
 - Plant Battery Test (PBT) in put driven
- Slope thermal compensation
 - High temperature compensation
 - Low temperature compensation
 - Step temperature
 - STC Enable/Disable, low temperature Enable/Disable
 - mV/°C adjustments
- High temperature disconnect/ step setting
- Sophisticated reserve-time prediction
 - User configurable system reserve low alarm during normal operation
 - User configurable reserve time low alarm
- Recharge current limit
- Integrated “At Rate Calculator” for estimation purposes
- Battery discharge trace data
- Emergency Power-Off Input
- Lithium battery fail input

Features

Integrated Outputs

- Traditional office alarm interface with 19 Form-C alarm outputs (60 VDC @ 0.3A)
 - Standard default assignments: Power Critical-Audio, Power Critical-Visual, Power Critical- External, Power Major-Audio, Power Major-Visual, Power Major-External, Power Minor- Audio, Power Minor- Visual, Power Minor-External, Major Fuse (MJF), Minor Fuse (MNF), Battery On Discharge (BD), AC Fail (ACF), Rectifier Fail, High Voltage (HV), Very Low Voltage (VLV), Controller Fail, User Relay 1, User Relay 2
- 16 Form-Cs are user assignable
- 1 1/3A Auxiliary Battery Supply (ABS) Output

Remote Peripheral Monitoring & Control

- Modular monitor and control growth options for up to 95 monitoring modules optimized for DC voltage and shunt monitoring, binary input detection, temperature monitoring, external transducer monitoring
- Additional Form-C relay output control available
- Devices managed and powered by the controller via one twisted-pair cable over distances of 300m or more
- Daisy-chain connections from module to module reduce installation costs and cable congestion
- Modules can be located near monitored source
- Various panels for rack- mounting available

Enhanced Battery Management Features

- Battery discharge test options including periodic and manual tests (local/ remote) with configurable thresholds or 20% discharge algorithm
- State of charge indication

- Rectifiers on-line during test (minimize risk to service)
- Discharge data stored in non-volatile memory. Graphical data available
- Accurate battery reserve time calculations that factor in battery specific parameters, plant voltage, load, temperature, number of battery strings and number of cells per string
- Thermal compensation (STC) and recharge current limit to maximize battery life

Extensive Plant and Monitoring Statistics

- Real-time data and historical statistics help analyze critical performance parameters
- Statistics for planning preventive or corrective maintenance before serious problems occur

Derived Channels

- 32 derived channels enable arithmetic and Boolean operations to be performed on measured values to allow customer specific parameters such as output power to be calculated and managed

Rectifier Management

- Energy efficiency, provides ability to automatically shutdown selected rectifiers during low plant loads maintaining maximum battery plant efficiency without sacrificing reliability
- Provides Reserve Operation feature for maintaining designated number of rectifiers “ON” during engine runs as well as proper sequencing for generators
- Provides ability to transfer rectifiers (TR1-TR4) to “ON” for certain sequences of return AC

Galaxy Manager Compatible

- Centralized web server and database with multiple user access to live or managed data with drill down to problem details
- Monitor and control of more than 40 connected devices

Features (Continued)

- On-screen visibility of information management from polling or alarms received from alarm traps from multiple sites via network connection.
- Trend user selected data over time
- Automatic or manual report generation
- Standard engineering tools like reserve time calculators and cable voltage drop analyzer

Specifications

General

Operating Voltage	± 24 VDC, ± 48 VDC (Range: ± 18 to ± 60 VDC)
Input Power	36 W (depending on options)
Operating Temperature Range	-40°C to +75°C (-40 to 167°F)
Storage Temperature Range	-40°C to +85°C (-40 to 185°F)
Operating Relative Humidity	0 - 95% (non-condensing)
Physical Specifications	9.24" H x 20.76" W x 2.14" D
Display	8-line by 40-character backlit LCD

Galaxy Pulsar Plus Controller

The Pulsar Plus family of controllers provides system monitoring and control features for GPS power systems. This controller monitors and controls system components including rectifiers, and distribution modules via a multi-drop RS485 digital communications bus. System status, parameters, settings, and alarm thresholds can be viewed and configured from the controller's front panel display. Assignment and configuration of alarm inputs and output relays can be performed from a laptop computer connected to a local RS-232, by Ethernet port connection, or by remote access through a network connection. An optional modem is also available.

This controller utilizes standard network management protocols allowing for advanced network supervision. ABB Galaxy Manager™ software is the centralized visibility and control component of a comprehensive power management system designed to meet engineering, operations and maintenance needs. The Galaxy Manager client-server architecture enables remote access to system controllers across the power network.

Key Features

Remote Access and Features

- Integrated 10/100 Base-T Ethernet Network
 - TCP/IP (IPv6 and IPv4 compatible)
 - SNMP (V3, V2c, V1) for management
 - SMTP for email
 - Telnet/SSH for command line interface
 - DHCP for plug-n-play
 - FTP/SFTP for rapid backup and upgrades
 - HTTP/HTTPS for standard web pages and browsers
 - NTP for clock synchronization
 - Compatible with Galaxy Manager and other management packages
 - Shielded RJ-45 interface referenced to chassis ground
- Password protected security levels: User, Super-User, Administrator for all access
- Ground-referenced RS232 system port
- ANSI T1.317 command-line interface
- Modem access support
 - Remote via external modem
 - Callback security
- EasyView2, Windows - based GUI software for local terminal or Modem access
- Optional 1U Display with context alarm indicating backlight feature

Key Features (Continued)

- Supporting the following Protocols:
 - SNMP V3
 - SSL
 - SSH
- ECO Priority controls and features
 - Advanced generator controls to help minimize fuel consumption for off grid applications
 - ECO Energy Management allowing for non-ECO sources outputs to be minimized while ECO resources are available

- Source and load trend logging

Standard System Features

- Monitor and control of more than 60 connected devices
 - Robust RS485 system bus
- Standard and user defined alarms
 - Alarm test
 - Assignable alarm severity: Critical, Major, Minor, Warning, Record-only
 - 10 alarm relays (7 user assigned)
- Rectifier management features
 - Automatic rectifier restart
 - Active Rectifier Management
 - ARM (energy efficiency)
 - Remote rectifier (on/off)
 - Reserve Operation
 - Automatic rectifier sequence control
 - N + X redundancy check
- Multiple Low Voltage Load and Low Voltage Battery Disconnect thresholds
- Configuration, statistics, and history
 - All stored in non-volatile memory
 - Remote/local backup and restore of configuration data

- Industry standard defaults
 - Customer specific configurations available
- Remote/ local software upgrade
- Basic, busy hour, and trend statistics
- Detailed event history
- User defined events and derived channels

Standard Battery Management Features

- Float/boost mode control
 - Manual boost
 - Manual timed boost locally, T1.317, and remotely initiated
 - Auto boost terminated by time or current
- Battery discharge testing
 - Manual (local/remote)
 - Periodic
 - Plant Battery Test (PBT) input driven
 - Configurable threshold or 20% algorithm
 - Graphical discharge data
 - Rectifiers on-line during test
- Slope thermal compensation
 - High temperature
 - Low temperature
 - Step temperature
 - STC Enable/Disable, low temperature Enable/Disable
 - Configurable mV/°C slopes
- State of charge indication
- High temperature disconnect setting
- Reserve-time prediction
- Recharge current limit
- Emergency Power-Off input

Integrated Monitoring Inputs/Outputs

- System plant voltage (accuracy $\pm 0.04V$, resolution $0.01V$)
- One system shunt (accuracy $\pm 0.5\%$ full scale, resolution $1A$)
 - Battery or load
 - Mounted in the return side of DC bus
- Up to 15 binary inputs
 - Six inputs close/open to battery
 - 9 input close/open to return
 - User assignable
- Up to 7 Form-C output alarms ($60\text{ VDC @ }0.5A$)
 - User assignable
- 1-Wire™ bus devices
 - Up to 16 temperature probes (QS873)
 - Up to 6 mid-string monitors (ES771)

Galaxy Manager Compatible

- Centralized web server and database with multiple user access to live or managed data with drill down to problem details
- Monitor and control of more than 40 connected devices
- Management information from polling or alarms received from alarm traps from multiple sites are available on one screen via the inter/intranet
- Trend user selected data over time
- Automatic or manual report generation
- Standard engineering tools like reserve time calculators and cable voltage drop analyzer

Specifications

General

Operating Voltage	$\pm 24\text{ VDC}, \pm 48\text{ VDC}$ (Range: ± 18 to $\pm 60\text{ VDC}$)
Input Power	Less than 7 W
Operating Temperature Range	-40°C to $+75^{\circ}\text{C}$ (-40°F to 167°F)
Operating Relative Humidity	$0 - 95\%$ (non-condensing)
Storage Temperature Range	-40°C to $+85^{\circ}\text{C}$ (-40°F to 185°F)
Physical Specifications	Sizes vary by packaging option
Display	8-line by 40-character with alarm context sensitive backlit LCD

*Note that the Pulsar Controller is for single bay systems only where there are no disconnects

Ordering Information – GPS4830 Power System

The 4830 system can be deployed with capacity of up to 2,760 amps in a single cabinet, or expanded over multiple cabinets. Designed for either internal input AC breakers or terminal strip terminations, rectifier shelves can be spread across multiple bays to maximize distribution availability and provide modular growth. In applications needing additional distribution, two or more bays can be added and dedicated exclusively for distribution. For greater flexibility and working space, the 4830 may be equipped with a larger 36 inch wide distribution bay to accommodate large cable termination and egress.

Key Features

- AC input applications utilizing 3 Φ 480Y VAC or 3 Φ 208 VAC
- Full featured control and monitoring capability with the flagship Galaxy Millennium II or Pulsar Plus controller
- Up to 72 rectifiers and other digitally connected peripherals
- Single Bay, 12 shelf configuration with up to 2,760A of rectification and 44” of available distribution space
- TE rectifier efficiency

Additional Information

This ordering guide represents the most common configurations available for the GPS4830 product family. However due to the high number of combinations available within the product line, and changing availability of product parts, not all combinations and/or parts are represented herein. For a complete set of all combinations and latest updates see the GPS Ordering Guide Detailed Drawing as noted below. Other reference documents provide additional detail beyond this guide.

Step 5B: Monitoring Options (Pulsar) (Continued)

OUTLINE DRAWING

Temperature Measurement

Temperature and Voltage Measurement

Temperature/Voltage probes are needed for battery monitoring. They are connected to each battery or battery string to provide slope thermal compensation, temperature alarms and voltage imbalance alarms

Step 6: Select Optional AC Monitoring Equipment (Millennium 2 Controller Only)

Configured Panels

ORDERING CODE	DESCRIPTION	PHOTO
CC408646005	3P/3W 208/240V Line to Line, 10x12x14 box provides current, voltage, and power	
CC408646046	3P/3W 480V Line to Line, 10x12x14 box provides current, voltage, and power	
CC408646054	3P/4W 208V Line to Neutral, 10x12x14 box provides current, voltage, and power	

Transducers

ORDERING CODE	DESCRIPTION	PHOTO
CC408645808	1-phase AC Current Transducer (Built-in CT; 150A max current; 350 kcmil max conductor size)	
CC408645816	1-phase AC Voltage Transducer 120V	
CC408645824	1-phase AC Voltage Transducer 208/240V	
CC408644537	3-phase AC Voltage Transducer 208/240V Line to Line	
CC408645741	3-phase AC Voltage Transducer 208/240V Line to Neutral (120V)	
CC408645832	3-phase AC Voltage Transducer 480V Line to Line	
CC408645840	3-phase AC Current Transducer	

Step 6: Select Optional AC Monitoring Equipment (Continued)

Current Transformers (Required for Configured Panels and Current Transducers)

ORDERING CODE	DESCRIPTION	PHOTO
CC408645857	Current Transformer, 200A primary, 5A secondary, 4 in inside diameter	
408524862	Current Transformer, 400A primary, 5A secondary, 4 in inside diameter	
CC408645865	Current Transformer, 600A primary, 5A secondary, 6 in inside diameter	
CC408645873	Current Transformer, 800A primary, 5A secondary, 6 in inside diameter	
CC408645881	Current Transformer, 1,000A primary, 5A secondary, 8 in inside diameter	
CC408645898	Current Transformer, 1,200A primary, 5A secondary, 8 in inside diameter	

Miscellaneous

ORDERING CODE	DESCRIPTION
CC408645907	Barrier terminal block to extend the CT secondary leads beyond their 12 ft factory length. Use 12 AWG THHN wire in conduit.
CC408645915	Bud Industries Wall Box (12H x 10W x 8D) w/captive screw cover & internal mounting panel. For mounting transducers

Step 7: Select Battery Termination Options

Order optional termination bar if standard 8 positions may be exceeded

ORDERING CODE	DESCRIPTION
1600098086A	Bus bar extension kit. Included with cabinet assembly when ordered as group G201.
848385878	Optional adapter that allows two lugs to be stacked and connected at one location. (Provides one adapter)

OUTLINE DRAWING

1600098086A

KIT CONTAINS (2) 8600097665P BUS BAR AND HARDWARE
 PROVIDES 16 OUTPUT TERMINATIONS (ON 1.25" CENTERS) OR
 10 OUTPUT TERMINATIONS (ON 1.80" CENTERS)

848385878
 LUG ADAPTER

Step 8: Select Optional External Bus Bars

Bay to Bay Interconnect Kits

ORDERING CODE	DESCRIPTION	NOTES
150023060	External interconnection bus kit rated for 1800 amps	DO NOT mix 1,800A and 5,000A bars in the same system
150022833	External interconnection bus kit rated for 5000 amps	

External Return Bus Kits

ORDERING CODE	DESCRIPTION
CC848805160	External Return 90 Deg Kit: Option for termination of all distribution return cables. 1 per cabinet, 22 sets of 0.375" dia holes on 1.00" centers and 7 sets of 0.250" dia holes on 0.625" centers. The external return bus kit is an alternative to internal return buses when many large cables are required (see fig. below).
150047508	External Return 45 Deg Kit: Option for termination of all distribution return cables. 1 per cabinet, rated at 1800 Amps. 22 sets of 0.375" dia holes on 1.00" centers and 7 sets of 0.250" dia holes on 0.625" centers.
1600093385A	External interconnection bus cover kit configurable for 90 and 45 degrees

OUTLINE DRAWING

16. IF 750 KCMIL CLASS B LOAD LEADS ARE DESIRED, YOU MAY ORDER 848698338 CABLE SET THAT PROVIDES 15FT OF 407399526 KS24194 L2 4/0 WIRE WITH WP91412 L27 LUG ON ONE END AND 750 KCMIL CLASS B TO 4/0 CLASS I BURNDY BUTT SPLICE ON THE OTHER. THIS BUTT SPLICE TAKES UP MUCH LESS SPACE ON THE CABLE RACK THAN THE TYPICAL C-TAP

Management Visibility

Galaxy Manager software from ABB is a centralized visibility and control software offering that provides comprehensive power management capability, and is designed to meet the needs of engineering, operations and maintenance. Galaxy Manager uses a client-server architecture that enables remote access to system controllers across the power network. Features included in Galaxy Manager software include:

- Dashboard display with one-click access to management information database
- Trend analysis
- Scheduled or on demand reports
- Fault, configuration, asset, and performance management

Training

ABB offers on-site and classroom training options based on certification curriculum. Technical training can be tailored to individual customer needs. Training enables customers and partners to more effectively manage and support the power infrastructure. We have built our training program on practical learning objectives that are relevant to specific technologies or infrastructure design objectives.

Service & Support

ABB field service and support personnel are trusted advisors to our customers always available to answer questions and help with any project, large or small. Our certified professional services team consists of experts in every aspect of power conversion with the resources and experience to handle large turnkey projects along with custom approaches to complex challenges.

Proven systems engineering and installation best practices are designed to safely deliver results that exceed our customers' expectations.

Warranty

ABB is committed to providing quality products and solutions. We have developed a comprehensive warranty that protects you and provides a simple way to get your products repaired or replaced as soon as possible.

For full warranty terms and conditions please go to abbpowerconversion.com
