

► FUTUR

**Energy. Endurance. Power.**

## ► MAXIMUM EFFICIENCY

### You can't get any more efficient than this

With the new TriCOM FUTUR, we introduce the first fully resonant switching HF (High Frequency) charging system in the world.

In principle, HF chargers are "switching power supplies", which means that electronic switches are switched on and off at high frequency (50-100 kHz). All HF chargers currently available today have a switching process that is not "full resonant", but "quasi-resonant" or "hard" which inherently leads to power loss during the switching process.

For the new TriCOM Futur we have developed a state-of-the-art charger that is ahead of its time: A new SR-Switching

Technology (Soft Resonance) that guarantees very "soft," lossless, high frequency switching (from 50 kHz to 170 kHz) over the entire operating range of a full charging cycle.

This HF technology is new for charging devices and guarantees a maximum efficiency of up to 97%. In addition, a maximum total charging efficiency is achieved in connection with the improved TriCOM Futur charge characteristics.

In multi-module operation, an innovative, intelligent module activation management also optimizes energy consumption even further during partial load operation and increases the service life.

## SR-Switching Technology

## ► EASY TOUCH

### Programming with a Touch Display

TriCOM FUTUR resonant frequency Chargers, in addition to the proven "one button" operation, are now available with the new Easy Touch graphic display

Using the Easy Touch resistive touch screen with its clear and structured menus, you can quickly select between 32 different charging programs for different types of batteries and different battery capacities. You can also switch to a set-up mode menu which allows you to program individual parameters.

# Simple to use

## ► ECO ENERGY

### Intelligent Charging

Our overarching design goal, regardless of whether our products are used individually or in a group, is always to conserve natural resources and reduce the environmental impact.

Regardless of whether the new high efficiency TriCOM FUTUR is used in combination with the patented Futur charging process or the charging station is managed with Total E-Control 4.0, the environment as well as the users benefit equally from innovative and energy, time, cost, and resource-saving system solutions.

The »IONIC Mixing« option has been further improved to reduce power consumption by up to 12%. This results in lower water consumption and therefore the maintenance intervals are significantly extended.

# Protect the environment

# ► TOTAL CONTROL

## Monitoring and Management System

The new Total E-Control 4.0 wireless monitoring and management system permanently optimizes battery and vehicle usage, and thus saves resources.

The Total E-Control offers the ability to use this proven management system more effectively through an innovative wireless networking capability and it can be selectively expanded using our new monitoring modules.

## Combinable System Modules:

- ▶ **next Battery Guard 4.0** - the proven, intelligent monitoring system with wireless networking.
- ▶ **icon Battery Guard 4.0** - now has a new wireless battery controller.
- ▶ **Central monitoring** - of batteries and chargers (can be configured individually).
- ▶ **NetVision** - remote access to batteries and chargers via the Internet/mobile phone network.
- ▶ **ConVision App** - monitoring and scanning function for tablets and smartphones.

# Wireless

## ► KEEP COOL

### The clean solution

An innovative, "encapsulated active Cooling" system for the power electronics guarantees a longer service life and saves money as well as resources.

The high efficiency of the TriCOM FUTUR with the new SR-Switching Technology simultaneously minimizes heat losses. For this reason, direct active cooling of the electrical system using a fan is not necessary. The passive convection cooling system prevents dirt and grime from penetrating into the device and thus protects the electronic modules. This increases the service life of the charger and significantly minimizes contamination by water, dust, and acid fumes. This permanently reduces service, replacement parts, and material costs.

## Passive Cool – Active Save

## ► QUICK CHECK

### **Service-friendly design**

The modular system that has proven itself over many years continues in the new TriCOM FUTUR and is further optimized with Quick Check.

Quick Check allows very effective inspection of the charger and allows quick, time-saving servicing.

The status of the charger and possible application errors can be queried very quickly via ConVision, the Easy Touch display, or the USB interface. When service is required, the service technician has quick access to the charger via the front panel and has at a glance a full overview of the status of the charger controller, the power module, and the power phases available. If necessary, the power modules can be swapped quickly and easily using the new plug-in system on the side panel.

The charger can continue to operate in the "In-Service" mode even when fewer modules are installed.

# Service friendly

### **State of the art charging systems**

- ▶ Maximum energy efficiency with a highest efficiency of up to 97% realized through:
  - A pioneering multi-resonance converter technology »SR-Switching« for charging devices that is one-of-a-kind in the world.
  - An intelligent activation management system for the charging modules when operating under a partial load (3-phase chargers).
  - Significantly reduced standby power consumption.
  - Optimal TriCOM Futur charge profile with IONIC Mixing.
- ▶ “In-Service” Operation - chargers will continue to charge with reduced output even after the removal of individual modules.
- ▶ Encapsulated cooling - of the power semiconductors using heat sinks to keep dust and grime to a minimum.

### **Suitable Battery Types:**

- ▶ Lead-Acid Batteries (tubular, flat plate, low-maintenance and maintenance-free).
- ▶ Nickel Cadmium batteries.
- ▶ Lithium-Ion Batteries (optionally available with a CAN interface).
- ▶ Programming of further battery types upon request.

## SYSTEM FEATURES

- ▶ **SR-Switching HF (High Frequency) charging system** - High system efficiency of up to 97%.
- ▶ **ECO Energy** - Charging with the highest possible energy efficiency - Intelligent solution for wireless networking – Save resources using an easy-to-install battery monitor.
- ▶ **Graphic Touch Display** - Intuitive operation via a 4.3" multilingual touch screen with a real-time clock and time zone setting.
- ▶ **Plug & Play** - fully automatic with dynamic adjustments based on the battery's age, temperature and state of charge.
- ▶ **Service Messages** - accurate display of all maintenance needs and faults.
- ▶ **Total E-Control 4.0** - wireless monitoring and management system permanently optimizes battery usage and the vehicle management system and thus saves resources.
- ▶ **Quick Check** - quick and easy inspection of the charger using ConVision, USB interface and the touch screen display.
- ▶ **Standard USB interface** - for communication with data media: Update the firmware, Read out the charge history, Activate additional functions and control access to the charger settings.
- ▶ **Ease of Service** - Modular design of the charger with an innovative plug-in technology and a cabinet concept that includes access from the side.
- ▶ **ConVision App** - concise programming and analysis system, stores the last 512 charge events in real time, optimal analysis of your fleet, exact failure mode incident control, provides ability to make battery/charger decisions without additional effort.
- ▶ **Electrical Standards** - TriCOM Futur Chargers comply with all European standards for EMC and electrical safety.
- ▶ **Options:** Temperature sensor, Battery Management Counter, IONIC Mixing, Remote control - high flexibility, ideal for customization and makes economic sense.
